

W4DUX Repeater

**W4DUX 442.92500 + Has now been converted to the DMR repeater mode:
DMR-MARC Networked Repeaters**

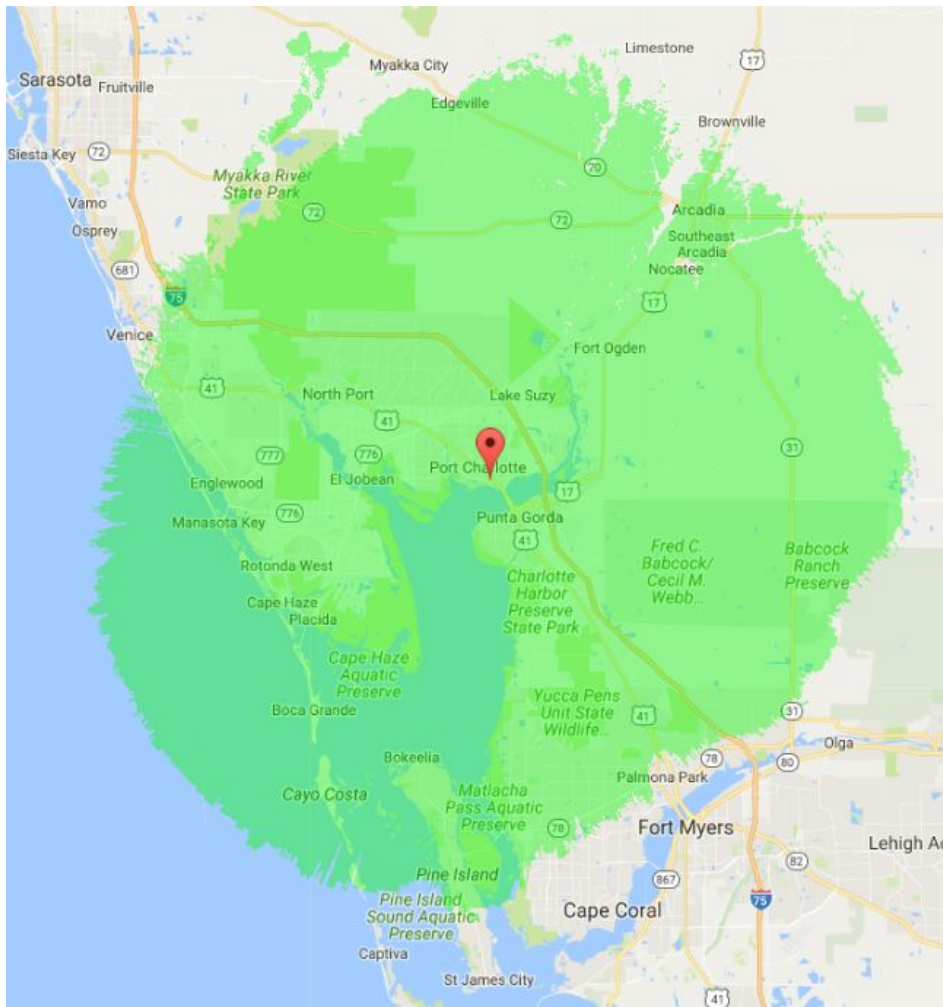

The DMR team has been working hard to get the repeater switch over up and running. We were able to put the radio on the air Saturday 2-4-2017 at 10:00 AM. There have been many helping hands and countless hours given to this effort by local amateur radio operators in the area and surrounding amateur radio clubs. Special thanks to Tom Palmisano, W9AEB for the loaner of his repeater for the project

Members working Erwin Cohen-KA1DJ, Al Szoldatits- K9MDW, Tom Palmisano- W9AEB

COVERAGE AREA:

The unit was successfully field tested by several of our members doing signal reports around the local area including Cape Coral. Area coverage signal strengths were greatly enhanced over the coverage provided by the Englewood repeater singularly.

Check back frequently as more information will be forthcoming with constant updates and improvements being actively worked on.
