

IRLP & EchoLink Made Easy

Over The Air Learning

VA3XPR

The New Voice of Downtown Toronto

Today's agenda

- **Turn OFF** you CTCSS Tone (Continuous Tone Coded Squelch System) on your radio
- What is IRLP?
- How to use IRLP?
- What is EchoLink?
- How to configure & use EchoLink?
- Who can you talk to on IRLP & EchoLink?

What is IRLP?

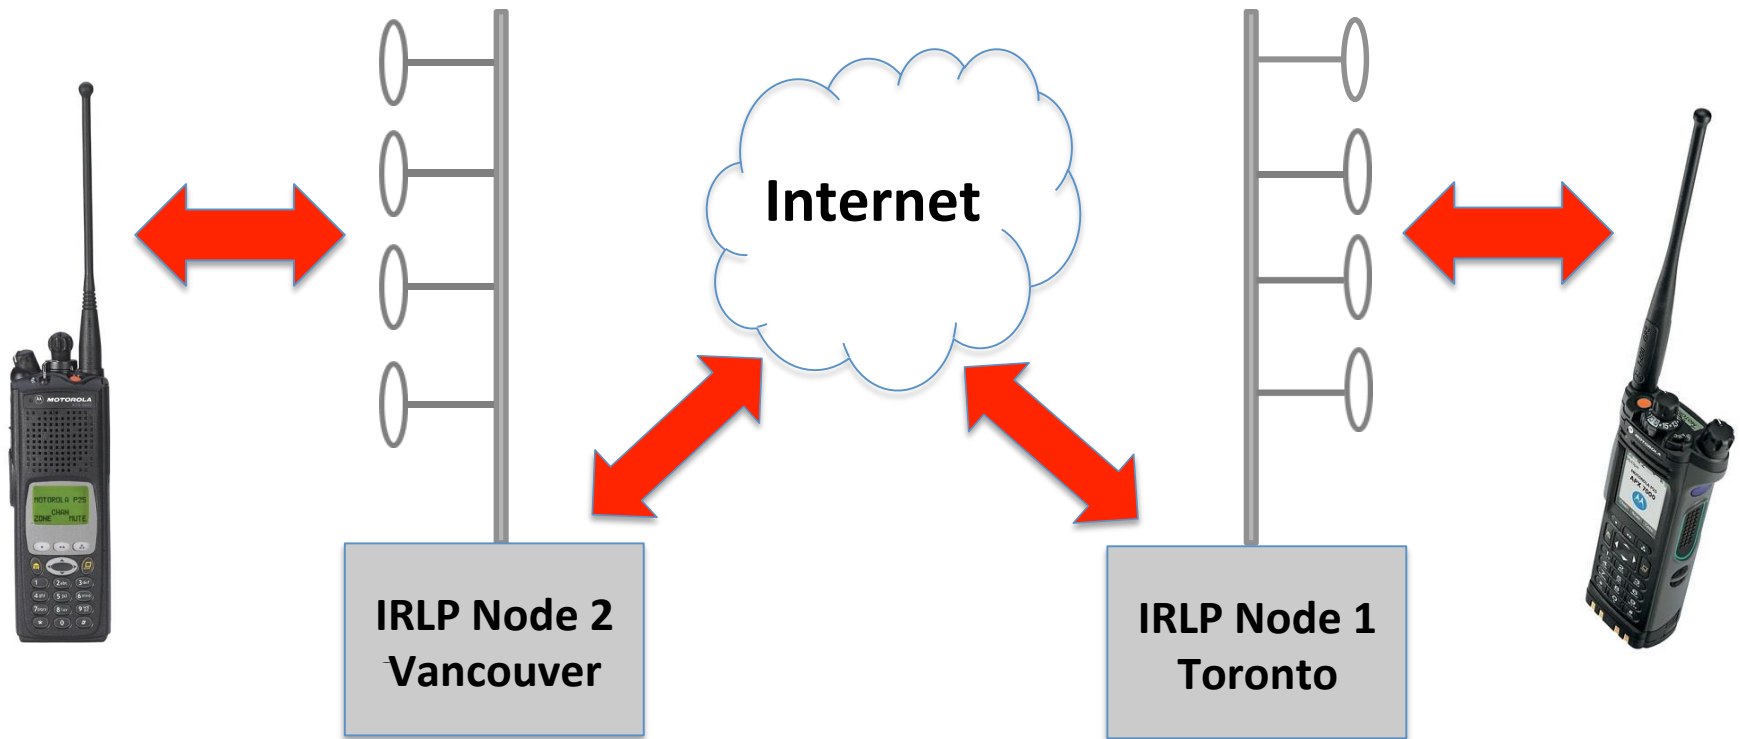

- IRLP = Internet Radio Linking Project
- Started in 1997 by David Cameron, VE7LTD
- Allows amateur radio systems to be linked together using the Internet
- Nearly 3,000 IRLP nodes around the world

IRLP Terminology

- **Node**
 - A computer that allows access to the IRLP network — Example: a telephone
- **Reflector**
 - A computer that allows multiple nodes to communicate with one another at the same time
 - Reflectors can support 9 simultaneous conversations. Example: a telephone conference bridge

IRLPNode to Node Communications

IRLP Reflector Communications

How to Use IRLP?

- Find a nearby IRLP node
- Obtain permission to use it and the required access codes
- Review the IRLP usage guidelines
- Start making calls!

Finding a Nearby IRLP Node

- **Using a PC or Mac**
 - Go to Status.irlp.net
 - Search Repeaterbook.com
- **Using a Smartphone**
 - Download an app
 - IRLP*me
 - IRLP Finder

Obtaining Access to an IRLP Node

- **Obtain Permission from the node owner**
 - Node owners can be found on **status.irlp.net** under the node info.
- **Obtain the Required Access Code**
 - Many nodes are open and require no special access code

Review the IRLP Usage Guidelines

- **The Basic:**
 - ***IDENTIFY*** before and after using IRLP an node
 - ***PAUSE*** after keying and between transmissions
 - ***AVOID*** lengthy rag chewing or calling CQ

Find out more @ IRLP.NET

Making IRLP Calls

- **Connecting to another IRLP Node:**
Announce your call K???? Bringing up IRLP Node
 - Enter “*IRLP NODE#*” (XXXX)
- **Disconnect from an IRLP Node:**
 - Enter “**73**” then announce your call K??? Clear
- **Example**
 - You want to connect to a net on IRLP Reflector 9558 using an open IRLP node.
 - **Connect:** Enter “**9558**”
 - **Disconnect:** Enter “**73**”

What is EchoLink?

- Created by Jonathan Taylor, K1FRD
- Allows amateur radio systems & operators to communicate using the Internet
- Over 200,000 EchoLink users around the world

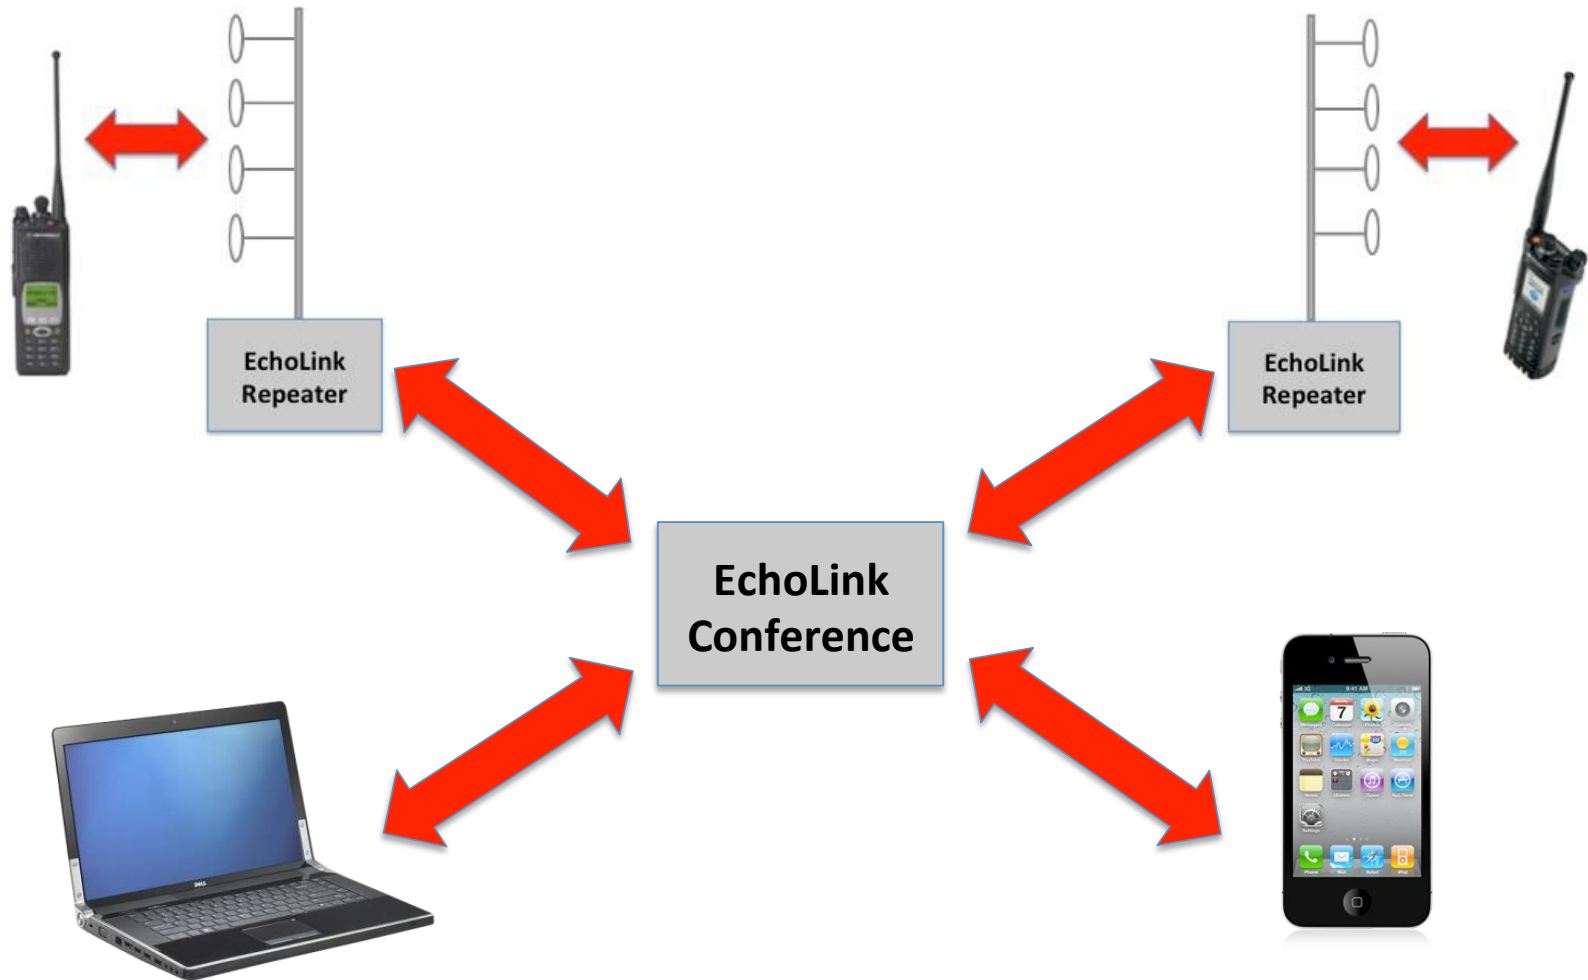

EchoLink Terminology

- **Users**
 - Typical EchoLink users
- **Links**
 - EchoLink connected to a simplex radio
- **Repeater**
 - EchoLink connected to a repeater
- **Conference**
 - Allow multiple EchoLink users to communicate simultaneously, like an IRLP reflector

EchoLink Terminology

- Usually oriented around a specific topic, region or language
- Allows only 1 conversation at a Time

EchoLink Conference Communications

Making EchoLink Calls

- **Announce your call K???? Bringing up EchoLink**
- **Connect to another EchoLink Node**
 - Enter “ *# plus EchoLink NODE#* ” (#XXXXXX)
- **Disconnect from an EchoLink Node**
 - Enter “**73**” then announce your call K???
Clear
- **Example**
 - You want to connect to EchoLink
Node 152038 using RF on a local open EchoLink Node.
 - **Connect:** Enter “**#152038**”
 - **Disconnect:** Enter “**73**”

How to set-up and use EchoLink?

Download & install

1. EchoLink for your PC, Mac or Smartphone
2. Provide proof of license to EchoLink
3. Configure EchoLink with your call sign & details
4. Start making calls!

Downloading EchoLink

Static IP Address of your EchoLink PC

Provide Proof of License

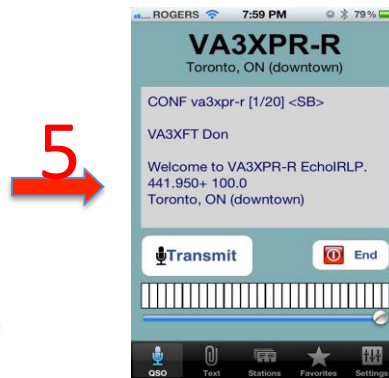

- Scan your Amateur Radio Operator Certificate, or equivalent into an supported image type
- Validate your information on the EchoLink website
- Submit your scanned Operator Certificate
- Validation should occur within a couple of days
